

Check OK or NG

- This example involves two different colors red and green to display the label and output the label specific coordinate values on the console.
- Execute a test that involves only two labels. It works well if the result label is OK, Otherwise there is something wrong, it is NG.

Appendix

1 : Load Error Code Definitions:

status	Definitions
0	Success
1	Configuration file not found
2	Batch parameter not found
3	dete_thres parameter not found
4	class parameter not found
5	Missing required DLL for execution
6	ARG - NVIDIA graphics card error
7	Not supported
8	Out of bounds
9	Insufficient memory
10	Missing model-related files for loading
11	Load failed
12	Status count
50	Model type error or unable to read model.conf file

2 : Predict Error Code Definitions:

status	Definitions
0	Success
1	Configuration file not found
2	Batch parameter not found
3	dete_thres parameter not found
4	class parameter not found

status	Definitions
5	Missing required DLL for execution
6	ARG - NVIDIA graphics card error
7	Not supported
50	Authorization file does not exist or permission to read is denied
51	Insufficient memory
52	Missing model-related files for loading
53	Load failed
54	Status count
55	Model type error or unable to read model.conf file
56	No write permission for the authorization file
57	Unknown error related to authorization
58	Authorization file version is different from SDK version
59	Exceeded the limit of the number of labels
